

HEALTHCARE

Industry Challenges

- Health Insurance Portability and Accountability Act (HIPAA)
- Management of Protected Health Information (PHI)
- Rapid and secure access to patient data

Business Value Proposition

- Industry leading physical records management feature set
- HIPAA and Sarbanes-Oxley compliance
- HL7 support
- Merging of duplicate records
- Collaboratively design and implement an unlimited number of records retention schedules for the archiving or destruction of records
- Track records from point of creation through archiving and final disposition
- Restrict sensitive data via the configuration of an unlimited number of role-based security groups
- Maintain complete audit histories for every record
- Minimize “lost” records with low-impact user compliancy and proven recovery strategies
- Maintain records integrity via proven inventory practices
- Maximize end-user accuracy and efficiency through workflow improvements including automated data entry, records requesting, bulk updating, and merging of duplicate records
- Analyze process metrics identifying bottlenecks and potential workflow improvement areas
- Encourage end-user “buy-in” with intuitive interface

Technology Highlights

- True thin client enterprise application supporting all contemporary browsers
- Enterprise Content Management integration
- Barcode and Radio Frequency Identification (RFID) ready
- Available on-premises or in the cloud

Existing Client Implementations

- Leading hospitals
- Health insurance companies
- Public health services
